<b>PHP Version:</b>			
<b>Has patch:</b>			
<b>Complexity:</b>			
<b>Subject:</b>	Implement magic findBy*() and findOneBy*() methods in the base repository		
<b>Description</b>			
<p>The base Repository should provide some magic __call() method taking care of findBy*() and findOneBy*() method calls, returning the results of searches for a property called after the method:</p> <pre>\$result1 = \$repository-&gt;findByFoo('bar'); \$result2 = \$repository-&gt;findOneByFoo('bar');</pre> <p>\$result1 will contain an array of all objects whose property 'foo' is 'bar'. \$result2 will contain the first object which matches a search for 'foo' == 'bar'.</p>
