

TYPO3.Flow - Bug # 26159

Status:	Resolved	Priority:	Must have
Author:	Christopher Hlubek	Category:	Persistence
Created:	2011-04-20	Assigned To:	Christopher Hlubek
Updated:	2011-05-04	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	PersistenceMagicAspect doesn't set unique identifier for value objects		
Description			
In change la8a607386d69b00183f4b20acd2823296a7cfdff the pointcut for the value hash generation was changed to before. With the current way of getting properties from the object, every value object gets the same identity. The aspect should consider the method arguments to calculate the value hash.

[BUGFIX] Fix calculation of identifier for value objects

The generateValueHash advice is a before advice, thus it needs to use the arguments given to __construct() for calculating the hash. This is safe, since for value objects everything contributing to their value has to be given as constructor arguments.

Cleans up the unit tests along the way.

Fixes: #26159
