PHP Version:			
Has patch:			
Complexity:			
Subject:	Initialize sessions only when necessary		
Description			
As soon as a session is initialized, a cookie is sent to the browser and therefore making client- or proxy-side caching impossible / hard. We therefore should only initialize a session when really needed, for example after authentication or when objects in a session scope exist.

[FEATURE] Initialize session and session objects on demand

The default behavior of FLOW3 was that a session was initialized – and thus a cookie sent – on every request, no matter if the session was needed or not. This feature delays session initialization until when a session is really needed. Existing sessions will be resumed automatically.

A new session is only started if the Session->start() method is called explicitly, or if a method which was tagged with @session autostart=true was called.

Resolves: #26358
