TYPO3.Fluid - Bug # 26394

Status:	Rejected	**Priority:**	Must have
Author:	martin no-lastname-given	**Category:**	ViewHelpers
Created:	2011-04-28	**Assigned To:**	
Updated:	2011-10-03	**Due date:**	
Has patch:	No		
Affected Flow version:			
Subject:	Form Viewhelper does not work with html5 custom data attributes		
Description			

<f:form.textbox property="name" data-anything="some info" />

Will produce no output at all.

It would be great if fluid's tag-processing was more liberal and transparent in general. Maybe switch to DOM instead of the custom implementation?

- Status changed from New to Rejected

Hey,

I guess you are using v4 and do not have your exception handler correctly configured? (in the install tool).

data-anything is **not** a supported argument by the Form-ViewHelper -- that's why an exception is thrown. If you are in production context, this exception leads to rendering only a white page.

Fix: <f:form.textbox additionalAttributes="{data-anything: 'some info'}" /> should work. If not, please file another bug.

Best regards,
Sebastian

Sorry, must have missed that in the docs :)

#3 - 2011-09-22 15:16 - Bastian Waidelich

- Has patch set to No

Can you confirm, that the syntax from above works? (because we're not yet sure whether dashes are currently supported in the array syntax.

By the way: We're planning to extend the syntax so that you can specify array items directly like:

    <f:form.textbox additionalAttributes.data-anything="some info" />

But that's not yet implemented.

#4 - 2011-09-30 23:39 - Thomas Allmer

I can confirm that the following syntax works

    <f:image src="{image}" alt="" maxWidth="140" maxHeight="280" additionalAttributes="{data-behavior: 'ImageFullDownload',
    data-imagefulldownload-fulldownload: '{a:uri.imageDownload(src: \'{image}\', maxWidth: 1920, maxHeight: 1200)}'}" />

it may get a little tricky with the ' but it works :)

the additionalAttributes dot syntax sure looks nice - looking forward to it :)
