Updated:	2011-05-07	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Subject:	Magic Object Routes		
Description			
<p>I'm dreaming of having a more intuitive way of defining default object-controller routes like this:</p>			
<pre>- name: 'Ticket' uriPattern: 'tickets/{ticket}({@format})' defaults: @package: Gurus @controller: Ticket @action: show @format: html routeParts: ticket: handler: F3\Gurus\Routing\TicketRoutePartHandler</pre>			
<p>Should look like this:</p>			
<pre>- name: 'Ticket' uriPattern: 'tickets/{ticket}({@format})' defaults: @package: Gurus @controller: Ticket @action: show @format: html</pre>			
<p>And the route configuration should autodetect what identifier to use (uuid or autoincrement integer values, depending on the model-aspect-definition) for resolving the object. Routes like tickets/9fadfc1e-c268-40f1-8190-547448d0d4b8.xml should work "out-of-the-box".</p>			
<p>Today I have to use such an ugly route:</p>			
<pre>- name: 'Ticket detail' uriPattern: 'tickets/show({@format})' defaults: @package: Gurus @controller: Ticket @action: show</pre>			

@format: html

..that resolves in something like this: tickets/show?ticket[__identity]=5f1e5e06-2430-45be-addf-4b5236d27229

Thanks for reporting Martin, but there is a ticket for that already. I'll close this one to avoid confusion.

And, promised, magic object routes will come very soon! ;)
