Subject:	ProxyNode should not automatically persist newNode if it has been cloned beforehand.		
Description	<p>If one has a \$proxyNode, clones it, and changes a property on that node, these changes are automatically persisted. This also happens if one clones the ProxyNode. In this case, however, it needs to lose its connection with the Persistence Layer (and a call to Repository::update() is needed again).</p>

[BUGFIX] ProxyNode only persists the newNode if it has not been cloned

If the ProxyNode has been cloned, we only add the newNode when calling NodeRepository::update(ProxyNode), as only then the changes should be persisted.
