Updated:	2011-05-23	**Due date:**	
PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	File extension of resources must be lower cased		
Description			

When uploading a resource with upper case characters in the file extension (for instance "SomeFile.JPG") the saved persistent resource will be saved with a lower cased file extension ("<hash>.jpg"). This is correct, because it avoids clashes for two files with the same content (= same hash).
Resource::getFileExtension() already returns the lowercased extension, Resource::getFilename() does not yet.

[+BUGFIX] Always lowercase file extensions in Resource

When uploading a resource with upper case characters in the
file extension (for instance "SomeFile.JPG") the saved
persistent resource will be saved with a lower cased file
extension ("<hash>.jpg"). This is correct, because it avoids
clashes for two files with the same content (= same hash).

This change makes sure that Resource::getFileName() also
contains the lowercased file extension.
