

TYPO3.Flow - Task # 2711

| | | | |
|---|--|---------------------|---------------|
| Status: | Resolved | Priority: | Should have |
| Author: | Karsten Dambekalns | Category: | Configuration |
| Created: | 2009-02-25 | Assigned To: | |
| Updated: | 2010-10-20 | Due date: | |
| Sprint: | | | |
| PHP Version: | | | |
| Has patch: | | | |
| Complexity: | | | |
| Subject: | Refactor method names in configuration manager | | |
| Description | | | |
| The methods <code>getSpecialConfiguration()</code> and <code>loadSpecialConfiguration()</code> seem to be misnamed. What is special about them? I guess they should be named simply without the special, so that we have "settings" and "configuration" in the manager. | | | |

Associated revisions

Revision 2cda63f5 - 2009-08-31 15:56 - Robert Lemke

[+FEATURE] FLOW3 (AOP): Parse errors in AOP proxy code (introduced by a potential bug) will now be treated properly by throwing a meaningful exception.

[-FEATURE] FLOW3 (Configuration): Removed support for PHP-based configuration files. This caused a lot of overhead and in practice we want everyone to use YAML files anyway.

[+FEATURE] FLOW3 (Configuration): Implemented support for cached ("compiled") configuration. When the new FLOW3.yaml option "configuration: comileConfigurationFiles" is turned on, all configuration will be compiled into a PHP file which from then on is read instead of parsing the YAML files everytime. Please see the updated documentation for more information. Resolves #4460

[~TASK] FLOW3 (Configuration): Completely refactored the Configuration Manager and a few related classes. Its methods now each fulfill a clear purpose and work more effective. The method names now also better describe what each method is doing. Resolves #2711

[-TASK] FLOW3 (Configuration): Removed the WritableSourceInterface - this is now a standard feature of a configuration source.

[+TASK] FLOW3 (Core): Refactored and cleaned up the FLOW3 Bootstrap. Constants are now defined by a static method and all configuration related functionality has been moved to the Configuration sub package. Also replaced the evil die() calls by more handsome exit() calls. Relates to #2117

[+TASK] FLOW3 (Object): Moved some object initialization code from the Bootstrap to the Object Manager and further cleaned up the Object Manager's code. Wrote additional tests - now this class has 100% test coverage. Relates to #2117

[+API] FLOW3 (MVC): Added a few @api annotations to properties of the AbstractController and ActionController.

[-API] FLOW3 (Utility): Removed the getSAPIType() method from the Environment class. Just use the constant FLOW3_SAPITYPE instead. Resolves #3567 and relates to #2117.
