Updated:	2011-07-04	**Due date:**	
PHP Version:			
Has patch:			
Complexity:			
Subject:	Vendor Namespaces Support		
Description			

FLOW3 should support the concept of vendor namespaces and therefore support class names like the following, thus making the "F3" namespace obsolete:

\RobertLemke\AutoMakeTemplate\Controller\FooController
\Zend\...
\TYPO3\FLOW3\Package\PackageManagerInterface
\TYPO3\TYPO3\Domain\Model\Site

[TASK] Adjustments to new vendor namespace and package key format

This change set contains the new directory structure / new pointers
to submodules which reflect the new vendor namespaces and package key
format.

[FEATURE] Vendor Namespaces Support

This change set contains the main part of the vendor namespaces support
in FLOW3. It contains most code adjustments to the new namespace of
the FLOW3 framework packages and the new package key format.

Also features a few cosmetic changes and additions where I came along.

Furthermore this commit contains various new tests for previously
untested parts of FLOW3.

Revision d100a281 - 2012-05-09 16:05 - Aske Ertmann

[BUGFIX] Avoid reverse ordering of packages in configuration manager

This issue causes some problems when packages are overwriting YAML settings,
because in #27490 the package order is reversed in order to put TYPO3.FLOW3
at the top. This has some unnecessary consequences.
