TYPO3.Fluid - Bug # 27938

Status:	Resolved	**Priority:**	Should have
Author:	Alexander Stehlik	**Category:**	ViewHelpers
Created:	2011-07-07	**Assigned To:**	
Updated:	2011-08-18	**Due date:**	
Has patch:	No		
Affected Flow version:			
Subject:	Textfield view helper can not handle zero (not empty) values		
Description			

When using the form.textfield view helper strings or integers that are 0 (zero) are treated as empty values. So if a user now enters 0 in the form field and then edits the object the form field will not show the "0" he entered but an empty field.

This is because in TextfieldViewHelper the empty() function of PHP is used:

    87 if (!empty($value)) {
    88   $this->tag->addAttribute('value', $value);
    89 }

Since AbstractFormFieldViewHelper::getValue() will return NULL if no value was set, it would be better to use isset() in my opinion.

Revision 05be2228 - 2011-08-16 15:28 - Stefan Neufeind

[BUGFIX] Make textfield view helper handle zero (not empty) values

Values which are 0 (zero) are treated like but are not an empty string.
They need to be handled as normal values (output to be shown in field).

Thanks to Alexander Stehlik.
