

## TYPO3.Flow - Feature # 28137

<b>Status:</b>	Closed	<b>Priority:</b>	Should have
<b>Author:</b>	Benjamin Eberlei	<b>Category:</b>	Persistence
<b>Created:</b>	2011-07-12	<b>Assigned To:</b>	Karsten Dambekalns
<b>Updated:</b>	2011-08-29	<b>Due date:</b>	2011-07-13
<b>PHP Version:</b>			
<b>Has patch:</b>			
<b>Complexity:</b>			
<b>Subject:</b>	Do not use clone in PersistentObject ParamConverter		
<b>Description</b>			
<p>Currently clone is used inside the PersistentObject ParamConverter and objects have to be merged back into persistence context (in case of doctrine) using \$em-&gt;merge(). This creates unnecessary performance problems where the state of an object is first moved into a new object, then moved back into the persistent object.</p> <p>This is a dependency of the previous transaction ticket, since cloning is currently necessary with transactions always being flushed to the database.</p>
