

TYPO3.Flow - Bug # 28138

Status:	Rejected	Priority:	Should have
Author:	Bastian Waidelich	Category:	Reflection
Created:	2011-07-12	Assigned To:	Robert Lemke
Updated:	2011-07-14	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	ReflectionService Cache should be case insensitive		
Description			
<p>Currently ReflectionService stores reflected classes and methods in the firstLevel Cache by referring to the correctly cased class/method name.</p> <p>This should be changed to always use lowercased cache identifiers in order to make ReflectionService work for classes/methods where the case is not known (e.g. CommandController).</p>			

History

#1 - 2011-07-14 13:24 - Bastian Waidelich

- Status changed from New to Rejected
- Target version deleted (1.0 beta 1)

After thinking about it again and discussing it with other team members I'm not sure anymore, whether ReflectionService should really be changed to handle wrong cased method/class names. Especially as the built-in Reflection of PHP does not seem to support it in every case (class names are expected correctly cased sometimes).

For the above mentioned CommandController, the issue is already solved with #28172
