Updated:	2010-10-20	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Subject:	View Helper "Flash Message"		
Description			
Provide a view helper which allows for handling "flash messages", i.e. a short message / chunk of HTML which transports information from one action to another.			
Example: the createAction() successfully creates a Thing and submits the message "Successfully created Thing." to the view helper. Then a redirect to the indexAction() is carried out. The index view contains an area which displays a flash message, if any. In this case there's one: "Sucessfully created Thing."

What do you think of introducing a new method on the TemplateView:

```
$this->view->flash(... HTML STRING ...); ?
```

Greetings,

Sebastian
