Subject: ContentObjects should not render if corresponding node is not accessible

Description

Currently only the accessRole of TYPO3.TYPO3:Page nodes are enforced. But it should be possible to restrict rendering of a node more "fine-grained".

E.g. following should be possible:

```
1 <node type="TYPO3.TYPO3:Page">
2   <properties>
3     <title>Some Page</title>
4   </properties>
5   <node identifier="" type="TYPO3.TYPO3:Section">
6     <node identifier="" type="TYPO3.TYPO3:Text">
7       <properties>
8         <headline>Public text</headline>
9         <text><![CDATA[Should visible to everyone]]></text>
10      </properties>
11    </node>
12    <node identifier="" type="TYPO3.TYPO3:Text">
13      <accessRoles>
14        <role>SomeRole</role>
15      </accessRoles>
16    </properties>
17    <headline>Protected text</headline>
18    <text><![CDATA[Should only be visible to logged in users of role "SomeRole"]]></text>
19  </properties>
20 </node>
21 </node>
22</node>
```

[BUGFIX] dont render inaccessible ContentObjects

Currently only the accessRole of TYPO3.TYPO3:Page nodes are enforced.

This change ensures, that ContentObjects are not rendered if the corresponding node is not accessible to the current user.

In addition this adds some unit tests.

Resolves #28217
