<b>Subject:</b>	Autocomplete Widget modifies query with every request		
<b>Description</b>	<p>The autocomplete widget changes the query by adding constraints in the autocompleteAction of the widget controller. But as the query is passed by reference this adds new constraints with every request instead of replacing the other ones. Besides the amount of returned objects should be configurable (limit).</p>

[BUGFIX] Original Query is modified with every autocomplete request

In the autocompleteAction of the Autocomplete widget constraints are added to the query that is fetched from \$objects. As this is done by reference, new constraints are added to the same query again and again.

Besides this change adds a new configuration "limit" that defaults to 10.
