

TYPO3.Flow - Feature # 28683

Status:	Closed	Priority:	Should have
Author:	Bastian Waidelich	Category:	Cache
Created:	2011-08-02	Assigned To:	
Updated:	2012-11-07	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Subject:	CachingFramework should accept cacheldentifiers with special characters		
Description			
<p>Currently the CachingFramework throws an exception if the specified cacheldentifier contains a backslash for example. This leads to the fact that we are (sometimes faultily) escaping the identifier in various places. Instead the CachingFramework should handle this in a central place.</p>

- Status changed from New to Closed
- Has patch set to No

My suggestion: use md5() or an escaping function to sanitize the identifier (if possible). I'd rather not put it into the frontend itself because it adds unnecessary overhead for those cases where escaping is not needed.

Re-open if you don't agree.
