TYPO3.Fluid - Bug # 28972

Status:	Resolved	**Priority:**	Must have
Author:	Peter Beernink	**Category:**	Core
Created:	2011-08-14	**Assigned To:**	Sebastian Kurfuerst
Updated:	2011-08-16	**Due date:**	
Has patch:	No		
Affected Flow version:			
Subject:	(v5) Bug in new caching mechanism		
Description			

After creating a fresh clone of the FLOW3 base distribution, I encountered the following behaviour.
When you run the FLOW3 Welcome package for the first time, everything works as expected however, when you refresh the page, all styling is gone.

It turned out that the HTML output is missing all code between the <f:base> and the first variable, {version} in this case.
Doing some further checking, that whole block is missing from the cached PHP code in the Cache/Code/Fluid_TemplateCache/...html file

Although I've tested this in v5, it might as well be also an issue in v4.

[+BUGFIX] Resource Interceptor should create RootNode and no TextNode

We do not support compiling TextNodes with children, thus we create a RootNode
in the ResourceInterceptor.

Resolves: #28972
Change-Id: If63b3ff19ea9af433c042d06fc724cbab3987f42

- Assigned To changed from Bastian Waidelich to Sebastian Kurfuerst

I can reproduce the issue and the problem seems to be the Resource Interceptor that wraps the uri.resource ViewHelper around text nodes to fix relative URIs.

The good news: It's not a problem of the compiling process itself and it won't affect v4!

@Sebastian I assign this to you so you'll notice - I currently don't have enough time to dig deeper into this.

One more note:

> *The good news: It's not a problem of the compiling process itself [...]*

That's prohbably not entirly true:
The resource Interceptor adds child nodes to a TextNode - that seems to be not supported by TemplateCompiler::convertTextNode()

#4 - 2011-08-15 20:10 - Sebastian Kurfuerst

thanks! I'll investigate this further.
