Subject:	Implementation of move, copy and NodeType.isNodeType		
Description			
<p>For the implementation of WebDAV for the TYPO3CR I am missing some CR functionality to provide all features.</p> <p>First of all I need the possibility to move and copy a node and its subtree.</p> <p>Second is, that I need to check if a NodeType is nt:folder or nt:file</p> <p>Therefore I need the method isNodeType() implemented in the NodeType class.</p> <p>My implementation looks currently like this:</p> <pre>public function isNodeType(\$nodeTypeName) { return \$this->name == \$nodeTypeName; }</pre> <p>Thanks.</p>
