TYPO3 Flow Base Distribution - Bug # 29045

Status:	Resolved	**Priority:**	Should have
Author:	Ferdinand Kuhl	**Category:**	
Created:	2011-08-17	**Assigned To:**	
Updated:	2011-08-17	**Due date:**	
Affected Flow version:			
Subject:	Wakeup of Query sets wrong state if originally no constraint has been set		

Description

If I save a Query-Result in a WidgetController and afterwards call $result->getQuery->execute() I receive an empty result, because of the try-catch block around the execute call which simply returns an empty result in case of an exception.

The problem seems to be in the __wakeup() method of \TYPO3\FLOW3\Persistence\Doctrine\Query

```
public function __wakeup() {
    $this->queryBuilder->where($this->constraint);
```

everything works fine, if I inject a condition like this:

```
public function __wakeup() {
    if ($this->constraint)
        $this->queryBuilder->where($this->constraint);
```
