<b>PHP Version:</b>			
<b>Has patch:</b>			
<b>Complexity:</b>			
<b>Subject:</b>	Enable use of @ (shut-up-operator)		
<b>Description</b>			
<p>The FLOW3 error and exception handler does a good job. But if you have to integrate foreign code, suppressing foreign errors (E_STRICT or similar) is the only possibility to get this code to work.</p> <p>PHP suggests to check (error_reporting() === 0) in order to realize if error_handling have been temporarily disabled.</p> <p>I temporarily added to lines to the ErrorHandler::handleError function:</p> <pre>1 if(error_reporting() === 0) 2     return;</pre>

[FEATURE] Enable use of @ (shut-up-operator)

By default, FLOW3 makes sure to convert any error into an exception so that even notices don't go undiscovered.

But foreign code is not always clean and so E\_NOTICE or E\_STRICT are quite common. If one doesn't want to deactivate this kinds of errors generally the @-Operator is the only way to temporarily disable error-reporting.

This patch allows the error-handler to return immediately if it detects that the parent function made use of the shut-up operator

Ah! And I do think that ignoring the @-Operator is more a bug than a feature... but thats just personal opinion.
