Subject:	Add notes on removal of properties (alttext and special.userdefined)		
Description			
<p>Two things:</p> <ul style="list-style-type: none">- Affects the IMAGE element (around page 96): When the deprecated property "alttext" was set and "altText" was not, the value of alttext was used for altText. altText is the one finally used in the website. This no longer works in 4.6. You now must use altText. Here is the diff.- Affects HMENU special type "userdefined" (around page 101): I guess "special.userdefined" is meant here?! If so, add a note, that special.userdefined was removed in TYPO3 4.6. An HMENU of type "userfunction" should be used instead. Also check for "userdefined" below. There still are some references to it, e.g. in the table tsref:(cObject).HMENU.(mObj). Here is the diff.
