Hi,  
this project made me curious while browsing; what is the current state? The facts that e.g. this Task was changed to "on Hold" and the only assignee was deleted is a bit confusing...

Thanks and best,

I felt free to transfer the information I extracted out of the Model classes into a UModel chart; feel free to make suggestions or corrections.  
I would really like to see the project ongoing.

stupid me, made a mistake.

just as a note here, this is the current complete Specification:

<http://docs.oasis-open.org/ciq/v3.0/specs/ciq-specs-v3.html>

This is the "technical overview", which exclusively contains UML diagrams (which might be most interesting to us):

<http://docs.oasis-open.org/ciq/v3.0/supp/ciq-technical-overview-v3.html>

Deeply digging, here is a concrete description of the Address, for example:

<http://docs.oasis-open.org/ciq/v3.0/prd03/xsd/default/doc/xAL/xAL.html>

you can find some examples here which, in my opinion, present a good introduction of the weirdness of that whole thing,
