[FEATURE] Persistence Manager knows about unmanaged, new objects

This patch enhances the persistence aspect and the related code in the Persistence Manager so that getObjectByIdentifier() also returns those objects which have been created but not yet added to any repository.

That allows, among other things, to render URIs pointing to not yet persisted objects which have been carried around in a session container.

- Has patch set to No

There is a bug in the current implementation that does not reset new objects on clearState. This causes a lot of functional persistence tests to fail. I'll push a bugfix for that.
