

TYPO3.Fluid - Bug # 30138

Status:	Closed	Priority:	Should have
Author:	Martin Brüggemann	Category:	Core
Created:	2011-09-20	Assigned To:	Bastian Waidelich
Updated:	2013-10-23	Due date:	
Has patch:	No		
Affected Flow version:	FLOW3 1.0.0		
Subject:	Bad error message "TYPO3\FLOW3\Persistence\Doctrine\QueryResult could not be converted to string" if necessary namespace hasn't been loaded		
Description	<p>If you write your own paginator widget, try to load it in your fluid template but forget to define the necessary namespace, there's the following error displayed:</p> <pre>#1: Catchable Fatal Error: Object of class TYPO3\FLOW3\Persistence\Doctrine\QueryResult could not be converted to string in /Volumes/Data/Users/herr/Sites/_ZFWSPACE/guruhelp/Data/Temporary/Development/Cache/Code/Fluid_TemplateCache [...]</pre> <p>If the correct namespace is defined at the beginning of the viewhelper (f.e. {namespace g=Company\Testproject\ViewHelpers}) the user defined widget loads correctly and everything is fine.</p>

Hey Martin ;)

Sorry for the delay on this.. I'm closing this in favor of #53059 - feel free to comment or re-open if you don't agree
