Subject: Mockup and implementation of the "inspector"

Description

We created some mockups for the content edit "inspector".

This has to be implemented. We don't want to use the "edit" button but have a "apply" button which is always visible but will be active as far as any changes are made. The editor doesn't have to go inside an edit-mode, all options are always visible.

The different edit-functions are collapsable and expandable through an accordion. It should be possible to expand or collapse all via a button on the top and it should be possible to expand only those tabs you would like to expand. Afterwards the system should store the status while leaving an element and when editing it again you will have exactly the same accordion elements expanded again.

History

#1 - 2011-11-07 10:18 - Sebastian Kurfuerst

Hey Aske,

are you currently working on this feature?

I'm currently getting an overview, so that's why I'm asking.

Greets,
Sebastian

#2 - 2012-02-09 11:10 - Aske Ertmann

- Status changed from New to Resolved
- Assigned To changed from Aske Ertmann to Sebastian Kurfuerst
- % Done changed from 50 to 100

Can you agree that this is already implemented?
