

## TYPO3.Flow - Feature # 30256

<b>Status:</b>	Resolved	<b>Priority:</b>	Could have
<b>Author:</b>	Christian Jul Jensen	<b>Category:</b>	Command
<b>Created:</b>	2011-09-24	<b>Assigned To:</b>	Bastian Waidelich
<b>Updated:</b>	2012-05-08	<b>Due date:</b>	
<b>PHP Version:</b>			
<b>Has patch:</b>	No		
<b>Complexity:</b>			
<b>Subject:</b>	Package help in CLI		
<b>Description</b>			
Would be nice to get help for one specific package fx. './flow3 help kickstarter' would display only the kickstart part of the help screen, maybe with some additional info about the commands

Revision e382d9fe - 2012-03-14 19:33 - Bastian Waidelich

[FEATURE] Package help in CLI

This extends the CLI to display a list of all commands of a specified package including their short description.  
Also if more commands match a given identifier, now the list of all matching commands with short descriptions is displayed.

Change-Id: I9bdb976f7a02b2c4704c3234641aafbaafe245ec

Resolves: #30256

Releases: 1.1

### History

- *Category set to Command*

Nice idea, I would even go one further and allow to specify the controller too (e.g. "typo.flow:package" or just "package").  
Do you have a concrete idea on what should be outputted? We have **short description** (the first line of the command method annotation), **description** (the rest of the annotation) **command identifier**, **usage**, **arguments** and **related commands**.

Currently flow3 help package:create outputs:

Create a new package

COMMAND:

typo3.flow3:package:create

USAGE:

./flow3 package:create <package key>

ARGUMENTS:

--package-key     The package key of the package to create

DESCRIPTION:

This command creates a new package which contains only the mandatory directories and files.

SEE ALSO:

typo3.kickstart:kickstart:package (Command not available)

What would flow3 help package return?

Maybe something like:

"PACKAGE" COMMANDS OF THE "TYPO3.FLOW3" PACKAGE:

-----

package:create                    Create a new package

USAGE:

./flow3 package:create <package key>

ARGUMENTS:

--package-key    The package key of the package to create

DESCRIPTION:

This command creates a new package which contains only the mandatory directories and files.

package:delete                   Delete an existing package

USAGE:

./flow3 package:delete <package key>

ARGUMENTS:

--package-key    The package key of the package to create

DESCRIPTION:

This command deletes an existing package identified by the package key.

[...]

A bit confusing like this.. any idea on how to structure this and what infos to include?

**#2 - 2011-10-11 08:30 - Robert Lemke**

I think that, for the sake of simplicity, it should output a list of commands similar to what the current help index produces.

**#3 - 2012-03-07 16:10 - Karsten Dambekalns**

- Status changed from New to On Hold

- Has patch set to No

**#4 - 2012-03-14 16:14 - Christian Müller**

Shouldn't we even close this, with the per command help screen we support already?

**#5 - 2012-03-14 16:38 - Christian Jul Jensen**

Nooooo! I still want this :)

The use-case is this: I know I want to use some command in the kickstarter package, but I can't remember the name or exactly which one. Currently I can only get the full list or the specific command.

The is already long, imagine when you have 50 packages installed.

I agree with robert that it should just be the short version of the full list.

Just ignore for now, I will make the patch myself some day when I get annoyed enough.
