<b>PHP Version:</b>			
<b>Has patch:</b>	No		
<b>Complexity:</b>			
<b>Subject:</b>	Rendering template of other action without forward		
<b>Description</b>			
Rendering a template of another action without doing a forward is currently too complicated. It should be possible by just calling  <code>\$this-&gt;view-&gt;render('actionName');</code>			
The problem is a call to <code>resolveView</code> which automatically uses a <code>NotFoundView</code> for the view.			

### History

#1 - 2012-03-14 16:17 - Christian Müller

- Has patch set to No

What would be a use-case for this again?

#2 - 2012-03-14 16:24 - Christopher Hlubek

Well, everytime you want to render a template that is not named by the action or you don't want to forward to another action to render its template. Of course in simple CRUD cases this is not needed. Some things I can think of are:

- Multiple templates depending on some value inside the action (I would consider switching to other partials inside one template a workaround)
- You cannot forward to another action (e.g. arguments not serializable) but want to render its template
