

TYPO3.Flow - Feature # 30428

Status:	New	Priority:	Should have
Author:	Christopher Hlubek	Category:	MVC
Created:	2011-09-29	Assigned To:	
Updated:	2011-09-29	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Subject:	Cloning of request arguments		
Description			
<p>It should be possible to have two instances of the same entity in a controller action by specifying a "@clone" annotation for a parameter. This is needed if an original object and an updated object need to be passed to the view.</p> <p>We have / will get identity problems with that of course, but we should find a solution for that.</p> <p>One use case would be the update of an address with advanced address validation / correction. The user should be able to see a corrected version and a original version of the address if there are any corrections.</p>
