

TYPO3.Flow - Bug # 30714

Status:	Closed	Priority:	Should have
Author:	Alexander Schnitzler	Category:	Error
Created:	2011-10-10	Assigned To:	
Updated:	2013-01-21	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Affected Flow version: FLOW3 1.0.0			
Subject:	\TYPO3\FLOW3\var_dump() memory use causes fatal error debugging objects.		
Description			
<p>During some FLOW3 CRUD testing, I got an error several times I wanted to debug objects that have related objects.</p> <p>Something like \TYPO3\FLOW3\var_dump(new SomeObject()) always worked, more complex object trees caused PHP run out of memory.</p> <p>In my example (see attached picture) I just created a "new"-form to create a new Message-Object that has a User-Object related as the sender of the message. Yet the debugging of that simple thing failed.</p>
