<b>Updated:</b>	2013-10-18	<b>Due date:</b>	

**Subject:** FrontendNodeRoutePartHandler does not match against complete RoutePath

### Description

Currently the FrontendNodeRoutePartHandler only matches a Request against the uriPattern until the **first occurrence** of the **splitString** (the next static RoutePart).

Example:

For the uriPattern '{node}/{foo}' the NodePartHandler would look for the first "/" in the request path and only match that against the node repository.

Instead the FrontendNodeRoutePartHandler should iterate through **all** remaining path segments until a segment does not match a node path, and then compare the exceeding path with the split string.

### History
