This is already the case. Help of the kickstart:model command:

    Kickstart a new domain model

    COMMAND:
      typo3.kickstart:kickstart:model

    USAGE:
      ./flow kickstart:model [<options>] <package key> <model name>

ARGUMENTS:

  --package-key   The package key of the package for the domain model
  --model-name   The name of the new domain model class

OPTIONS:

  --force   Overwrite any existing model.

DESCRIPTION:

  This command generates a new domain model class. The fields are specified as
  a variable list of arguments with field name and type separated by a colon
  (for example "title:string" "size:int" "type:MyType").
