

Core - Bug # 31663

Status:	Resolved	Priority:	Must have
Author:	Daniela Petrosino	Category:	Workspaces
Created:	2011-11-08	Assigned To:	Stefan Neufeind
Updated:	2013-12-10	Due date:	
TYPO3 Version:	4.5		
PHP Version:			
Complexity:			
Is Regression:			
Sprint Focus:			
Subject:	Moving pages (and page content) in the Workspace does not work		
Description			
TYPO3 version 4.5.7, iOS X or Lion or PC			
Moving pages (and page content) on the Workspace (via "drag and drop" on the page tree or using the "cut + paste it into"-function) does not work. If you want to move a page A into a page B, it may appear, but this is invalid after reloading the page tree. If you look at the menu item "workspace" it is to recognize that the changes are not registered/noted. The problem seems random and only on some pages and workspaces to appear. Moreover, the problem can be reproduced on other typo3 installations. Is there any adjustment missing out or can the problem be due to the allocation of rights? Since this is a very big typo3 project, all ext. that write into the page-table + DB have been cleaned + Log on MyISAM converted.

It's quite hard to fix "random" behaviour - are you able to reproduce this misbehaviour within the Introduction Package? How?

#2 - 2011-11-09 12:43 - Daniela Petrosino

- *File screenshots.jpg added*

I was able to reproduce the bug within the Introduction Package. Just create a workspace and try to move some pages as child under for example "Features". Then we moved "Features" and pressed the reload button.

What you see next is that some pages jumped back. This mostly happens with more than 3 child pages, but its pretty random.

We also looked in the mysql.log and the "UPDATE" query has the wrong pid.

#3 - 2011-11-09 12:49 - Daniela Petrosino

I forgot we could reproduce the bug in typo3 4.5.7 and 4.6

#4 - 2011-11-14 15:07 - Franz Koch

I'm currently also having issues on moving pages on the rootlevel of the website. It seems as if instead of the UID of the rootpage the UID of the page itself is stored as PID (thus recursive) and the page is gone then.

Is this change not included in Typo3 4.5.8? I have just updated my installation and the problems are still there. The issue is also not listed in the changelog.

#14 - 2011-12-08 11:02 - Stefan Neufeind

It is included in 4.5.8. Unfortunately the changelog wasn't updated to mention this (and various other) changes when packaging the new release.

Are you maybe hitting a corner-case which is not exactly what this bugfix here was about?

If you can, please try with a clean 4.5.8-installation (introduction-package maybe), try to reproduce your error and create a new issue on how to reproduce the problems you see. I promise to take a look a closer look at it then :-)

#15 - 2011-12-15 13:00 - Webadmin no-lastname-given

Thank you for quick response. You're right. It seems that our test was to weak. See #32592.
