Subject:	HMAC Convenience methods in HashService		
Description			
<p>The Cryptography\HashService currently comes with two methods for creating & validating HMAC hashes: generateHmac() and validateHmac().</p> <p>That requires the user to deal with the actual string and it's hash individually.</p> <p>I suggest to add two methods appendHmac() and validateAndStripHmac() that allows the user to simply append the HMAC to a given string.</p>
