

TYPO3.Fluid - Bug # 31939

Status:	Resolved	Priority:	Must have
Author:	Matthias Habegger	Category:	ViewHelpers
Created:	2011-11-19	Assigned To:	
Updated:	2013-01-21	Due date:	
Has patch:	No		
Affected Flow version:	FLOW3 1.0.0		
Subject:	preselection with a multiple form.select with a M:N relation		
Description			
<p>I have a M:N relation between my two model "book" and "category".</p> <p>Now I try to create a multiple select with the SelectViewHelper like that:</p> <pre><f:form.select property="categories" options="{categories}" optionLabelField="name" multiple="multiple" size="7" /></pre> <p>{categories} is a variable assigned in the controller. that works fine, all, categories are shown in the select.</p> <p>The problem is, that none of my preselected categories are selected.</p> <p>The html output looks like that:</p> <pre><input type="hidden" name="book[categories]" value="" /> <select id="categories" multiple="multiple" size="7" name="book[categories][]"> <option value="0bc305ec-8aff-4fa8-bdeb-476d7c21c841">Novels</option> <option value="8c2221e3-a3fd-4ce2-8f7e-66aac9eed5f5">Second Category</option> <option value="c1ca0c2d-08c4-4b22-b9c7-69bbd42de840">Third category</option> </select></pre> <p>I analyzed the problem and it seems, that the method "getSelectedValue" in the "SelectViewHelper" can't handle multiple preselects.</p> <p>I think the problem is also in the blog-tutorial when you try to edit post which already has related posts, they are not selected.</p>
