

## TYPO3.SwiftMailer - Bug # 32228

<b>Status:</b>	New	<b>Priority:</b>	Should have
<b>Author:</b>	Myroslav Holyak	<b>Category:</b>	
<b>Created:</b>	2011-11-30	<b>Assigned To:</b>	
<b>Updated:</b>	2011-11-30	<b>Due date:</b>	
<b>Subject:</b>	Cyrillic letters in mail aliases cause silent process fail		
<b>Description</b>			
Simple to reproduce:			
<pre>\$mail = t3lib_div::makeInstance('t3lib_mail_Message'); /* @var \$mail t3lib_mail_Message */  \$mail-&gt;setFrom(array(\$fromEmail =&gt; 'Cyrillic name like Петро - not OK')); \$mail-&gt;setTo(array(\$mail =&gt; 'Cyrillic name like Іван - not OK')); \$mail-&gt;setBcc(array('support@ruhomi.com', 'booking@hotelsbooking.com.ua')); \$mail-&gt;setSubject('Cyrillic subject - OK'); \$mail-&gt;setBody('Plain cyrillic text - OK', 'text/plain'); \$mail-&gt;send();</pre>			
It nicely "delivers" into local file, but silently fails delivering via mail(). Not sure, but can be buggy for whole Unicode charset not only cyrillic area.
