Subject:	Feature Moving Pages into branches / create new branches		
Description			
Missing Implementation of moving pages into branches in /TYPO3.TYPO3CR/Classes/Domain/Model/Node.php			
The functions <i>moveBefore()</i> and <i>moveAfter()</i> are implemented but there is no possibility to move pages into branches or create new branches by moving a page on another.			
Needed functions which update recursively the paths of their childs:			
<ul style="list-style-type: none">- <i>moveIntoBefore()</i>- <i>moveIntoAfter()</i>- special case <i>moveInto()</i> for creating a new branch

[TASK] Make setPath() protected and recursive

This removes setPath() from the NodeInterface and ProxyNode. It is now protected and works recursively by default, to ease moving and renaming of nodes.
