Complexity:			
Subject:	Add support for "required" dependencies via setter injection		
Description			
<p>Currently all dependencies injected through autowired setter injection (see #319) are optional.</p> <p>This should be configurable through a "@required" annotation on the inject* method. If an inject method is marked as required, the object builder would throw an exception if the dependencies can't be resolved. Such an exception would not be thrown for optional dependencies.</p>			

Associated revisions

Revision 29433667 - 2008-02-19 10:53 - Robert Lemke

- FLOW3: (Component) Added support for @required setter-injected dependencies. Resolves #324.
- FLOW3: (Documentation) Updated the Component documentation. Added a new section about required and optional dependency injection and about the new "inject*" methods for setter injection with autowiring support.
 - PhoneBookTutorial, Testing: Added @required tags where necessary.
 - FLOW3: (Reflection) Whitespace fixes
