

TYPO3.Flow - Bug # 32466

Status:	Resolved	Priority:	Must have
Author:	Daniel Ostmann	Category:	Reflection
Created:	2011-12-12	Assigned To:	Karsten Dambekalns
Updated:	2011-12-15	Due date:	
PHP Version:	5.3		
Has patch:	No		
Complexity:			
Affected Flow version:	FLOW3 1.0.0		
Subject:	Strange exception: Invalid annotation		
Description			
<p>On my localhost everything was fine. When i upload the framework to my server, i got this exception:</p> <pre>Uncaught Exception The @var annotation for "Pixelbrand\MemberManager\Domain\Model\Contribution::\$created" seems to be invalid.</pre> <p>More Information</p> <p>Exception code #1284132314</p> <p>File</p> <pre>/var/www/doms/cm.pixelbrand.biz/public_html/Packages/Framework/TYPO3.FLOW3/Classes/Reflection/ReflectionService.php line 1121</pre> <p>Exception reference #201112120946518ea6d6</p> <p>I tried different upload types (ASCII, binary, auto - i use FileZilla as FTP client), and i tried different linebreaks (NL,CR,both). Nothing works at all...</p> <p>The lines that throw the exception are:</p> <pre>/** * The created date * @var \DateTime */ protected \$created;</pre> <p>I got the same exception when i changed the annotation from DateTime to string or bool.</p> <p>I think, if i remove this property, then the next one would throw another exception like above. I think so, because it is the first file in model directory and the first property in this model class.</p> <p>This seems to be similar to #31087.</p> <p>I'm using PHP5.3.8 with FLOW1.0.1 but this happened to 1.0.0 as well.</p>

[BUGFIX] "Wrong" EOL characters break parsing of doc comments

When `\r\n` was used as EOL instead of just `\n` the parsed doc comments would retain the `\r` which would cause confusing exceptions in some cases later on.
