Sprint Focus:	

Subject:	imageViewHelper should not throw exception

Description

Hey guys,

we don't like the imageViewHelper to throw exceptions if an image is not found. it should behave like the underlying cObj::getImgResource() and just don't do anything.

regards, foertel, pniederlag

Revision a3e48b1b - 2015-06-16 17:20 - Helmut Hummel

[BUGFIX] ViewHelper Exceptions are logged in Production

In Production context all Exceptions from ViewHelpers

will be silently logged.

Additionally, the output is discarded from rendering.

In Development they will be re-thrown, so the

global exception handler will be triggered.

Resolves: #32528

Releases: master

- Status changed from New to Needs Feedback

Hi,

was this issue fixed or does it still exists?

#3 - 2014-10-30 12:53 - Riccardo De Contardi

It still exists in TYPO3 6.2.6

Test:
1. upload the image 539.png into /fileadmin/Images/
2. add somewhere in the page template /partial: <f:image src="fileadmin/Images/539.png" />
3. the image is shown
4. delete the image
5. refresh page - the following error is shown:

> Oops, an error occurred!

> File /Images/539.png/ does not exist.

> More information regarding this error might be available online.

#4 - 2014-11-03 15:37 - Alexander Opitz
- Project changed from Fluid to Core
- Category changed from Fluid: ViewHelpers to Fluid
- TYPO3 Version set to 6.2
- Is Regression set to No

#5 - 2014-12-08 15:10 - Alexander Opitz
- Status changed from Needs Feedback to New

#6 - 2015-03-02 13:43 - Christian Weiske

If someone implements this, it would be nice to have the option what to do when the image cannot be found:

1. Output no image tag
2. Output an image tag with a "broken" image whose path can be customized, maybe via an attribute
3. Throw exception

#7 - 2015-03-02 15:32 - Michael Münch

The Viewhelper should never throw any exceptions for invalid or non existing files cause this is not an breaking error which could result in invalid code execution.
Instead log the error to the system log and just output an empty string or dummy image so developers can track the error and customers / users can use the page as it is instead of seeing an "Oops an error occured".

While exceptions are fine during development and to protect pieces of the core from running into undefined states - they are not meant to be used as

simple hints to the end user of the website.

If someone can link me some instructions on how to create an patch - i'll try to share our "Bugfix" which we added to our core which simply adds an try / catch Block around some pieces und catch the exception for further processing.
