Updated:	2011-12-15	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Subject:	Make property mapping exception more verbose		
Description			
Currently an exception while property mapping reads as following:			
Property "bazbar" could not be set in target object of type "Foo\Bar\Baz\Xyz".			
For debugging purposes it would be helpful if it gets			
Property "bazbar" with value type "Doctrine\Common\Collections\ArrayCollection" could not be set in target object of type "Foo\Bar\Baz\Xyz".

[FEATURE] Making property mapping exception more verbose

When an exception occurs during property mapping it's hard for the developer to track what a specific type the intended value at runtime is.

This change adds the object's class name to the exception, if it is an object; otherwise the scalar type name is added.

Change-Id: If1e89d7dcecbcf381ab0e4450d6deec8eb97c301
Resolves: #32587

History

#1 - 2011-12-15 11:31 - Gerrit Code Review

- Status changed from New to Under Review

Patch set 1 for branch **master** has been pushed to the review server.
It is available at <http://review.typo3.org/7270>

#2 - 2011-12-15 12:18 - Adrian Föder

...besides, the change inserts a white space to avoid this:

#1297759968: Exception while property mapping at property path "":Property "foobar" with value type [...]

#3 - 2011-12-15 15:06 - Adrian Förder
