Updated:	2010-10-20	Due date:	
PHP Version:			
Has patch:			
Complexity:			
Affected Flow version:			
Subject:	ValidatorResolver can't parse validator arguments containing round brackets		
Description			
<p>Currently validation arguments defined in @validate annotations cannot contain round brackets ')' because they'd be interpreted as the end of an argument expression. Additionally they can't contain commas and probably not even equal signs.</p> <p>Make sure that either special characters can be escaped or that the values of the validation arguments have to be put into quotes.</p> <p>Especially important for the RegularExpressionValidator.</p>

Revision abc7990d - 2009-06-29 15:10 - Karsten Dambekalns

[FIX] FLOW3 (Validation): ValidatorResolver can now parse validator arguments containing round brackets, commas, equal signs, fixes #3275. The option values must be quoted for this to work (either single or double quotes will do).
