# TYPO3.Flow - Bug # 32830

Status: Resolved

Author: Sebastian Kurfuerst Category: Persistence

Created: 2011-12-24 Assigned To: Sebastian Kurfuerst

**Updated:** 2012-01-18 **Due date:** 

PHP Version:

Has patch: No

Complexity:

Affected Flow version: FLOW3 1.0.2

Subject: Validation on persist breaks with Doctrine Lazy Loading Proxies

Description

Hey everybody,

I am currently experiencing an error with the Validate-On-Persist:

Fatal error: Call to a member function getClassName() on a non-object in

/.../Data/Temporary/Development/Cache/Code/FLOW3\_Object\_Classes/TYPO3\_FLOW3\_Persistence\_Doctrine\_PersistenceManager\_Original.php on line 112

**Priority:** 

Should have

The stack trace is attached.

After debugging a little deeper, it appears that this happens when a lazily-loaded entity is updated. In this case, the get\_class(\$object) in ReflectionService returns something like "Doctrine\....Proxies\FooBarDomainModelBar" --> and obviously our Reflection Service cannot deal with this.

[BUGFIX] Make updating a Doctrine Lazy Loading Proxy work

When a Doctrine lazy loading proxy is persisted again, a fatal error is thrown because the Reflection Service cannot handle Doctrine Proxies.

We work around this issue by asking the Doctrine Entity Manager to resolve the class name.

A Functional Test reproducing the issue is included.

[BUGFIX] Fix FLOW3 1.0 Functional Tests

I introduced an error inside the functional tests in <a href="https://review.typo3.org/#change,7715">https://review.typo3.org/#change,7715</a> and this followup commit fixes it.
