Subject:	Editing of HTML elements with javascript causes problems		
Description	When an HTML element with inline javascript is edited this fails because the script is executed. We should come up with some kind of concept for this.		
Related issues:	related to TYPO3.Neos - Bug # 52387: Inconsistent Handling of HTML-Tags in HT... Resolved 2013-09-30

[BUGFIX] HTML editor should be able to edit inline JavaScript

- shows inline java script correctly in html editor
- inline java script is executed exactly once on apply
- html added in inline editing is escaped

Think about:

- if inline java script is broken, it breaks the backend

- File inlineJSatHTML.png added

ah, maybe that's the issue I had... I have inline JS; and as soon as clicking the "HTML Editor" button on the right, the editor opens obviously empty, creating such an (empty) popup:

```
1 <div id="" class="popover t3-popover-fixed t3-ui active" style="top: 18px; left: 527px; position: fixed; z-index: 10090; display: block;">
2 <div class="triangle left" style="top: 138px;"/>
3 <div class="header">
4 <div>HTML Editor</div>
5 </div>
6 <div class="content">
```

```
7 <div class="aloha-block-do-not-deactivate t3-htmleditor-window"></div>
8 </div>
9</div>
10
```

At the same time, I get an JavaScript error "syntax error"]]> at CSS.js line 182 (see attached file).

Maybe a protective invocation wrapper can be applied to inline JS functions, being only executed when NOT in that HTML editor context...

Html-Editing has some more corner-cases regarding JavaScript:

- JavaScript executed if HTML-Editor opened (already mentioned above)
- Sometimes content not displayed in editor (or only partially)
- Same display-behavior in content area

#5 - 2013-09-30 15:41 - Christoph Dähne

Also JavaScript should not be executed on Apply (before it is executed during the reload of the content area).

#6 - 2013-09-30 15:53 - Christoph Dähne

And the Cursor shall not be black.
