| **Sprint:** | |
| **PHP Version:** | |
| **Has patch:** | No |
| **Complexity:** | |
| **Subject:** | rename the default controller as DefaultController |

**Description**

The code could be more readable if the default controller is renamed from StandardController to DefaultController

---

**History**

**#1 - 2012-03-07 16:16 - Karsten Dambekalns**

*- Tracker changed from Suggestion to Task*

**#2 - 2012-03-07 16:16 - Karsten Dambekalns**

*- Project changed from TYPO3 Flow Base Distribution to TYPO3.Flow*

**#3 - 2012-03-07 16:20 - Karsten Dambekalns**

*- Category set to MVC*

*- Status changed from New to Rejected*

*- Assigned To set to Karsten Dambekalns*

*- Has patch set to No*

This change would affect **all** users and require adjustment of **all** standard controllers. The advantage is unclear, thus the cost-benefit ratio seems way off…

Historic background: Once upon a time FLOW3 used controller classnames without the Controller suffix. Now go and try to implement this: class Default implements ControllerInterface {} That is why we have StandardController…

Linguistic nitpicking: "default" exists only as a verb, "to default to something" - but that's only a funny side note :)
