

TYPO3.Flow - Feature # 33049

Status:	New	Priority:	Could have
Author:	Daniel Felix	Category:	Core
Created:	2012-01-08	Assigned To:	
Updated:	2012-03-07	Due date:	
PHP Version:			
Has patch:	No		
Complexity:			
Subject:	Allow configuration of context without environment variable (needed for IIS)		
Description			
<p>Hi there,</p> <p>I found some configuration in some of the Framework Packages corresponding the persistence:core:context. The comment just says that this should be set by the environment.</p> <p>This is quite a good idea, but just for Apache Users. I tried FLOW3 on IIS, and as you self wrote on your Kickstart Tutorial - you haven't tested it on IIS.</p> <p>Well the point is... IIS doesn't support VirtualHosts, so there is no way for me to define the needed context.</p> <p>I've done a workaround and added a line of code to the Web/index.php</p> <pre>putenv("FLOW3_CONTEXT=Development")</pre> <p>But this won't be a great deal if i have a config like the core:context.</p> <p>Maybe you could give this setting in the global Settings.yaml a try.</p>			

History

Just some extra info related to this issue:

On <http://www.iis.net/ConfigReference/system.webServer/fastCgi/application/environmentVariables> you can find documentation how you can set environment variables using Microsoft Administration Pack for IIS 7.0 (<http://www.iis.net/expand/AdministrationPack>).

This still seems to be a global setting for the entire IIS server though.

#2 - 2012-03-07 20:46 - Karsten Dambekalns

- Project changed from *TYPO3 Flow Base Distribution* to *TYPO3.Flow*

#3 - 2012-03-07 20:47 - Karsten Dambekalns

- Tracker changed from *Bug* to *Feature*

#4 - 2012-03-07 20:51 - Karsten Dambekalns

- Subject changed from *reactivate core:context for iis* to *Allow configuration of context without environment variable (needed for IIS)*
- Category set to *Core*
- Priority changed from *Should have* to *Could have*
- Has patch set to *No*
