Core - Bug # 33104

Status:	Resolved	**Priority:**	Should have
Author:	Dennis Ahrens	**Category:**	Workspaces
Created:	2012-01-11	**Assigned To:**	
Updated:	2013-12-10	**Due date:**	

TYPO3 Version:	4.6
PHP Version:	
Complexity:	
Is Regression:	
Sprint Focus:	

Subject:	create/move initial-placeholder page behind move-placeholder page broken.

Description

Fresh workspace without changes:

- Move page M that is located behind X as a child of Y to any other location.

- Now we create a new page N behind our moved page M (using the pagetree drag & drop) - the page seems to be located correct, but if you refresh the pagetree this new page N is not at the intended location anymore.

- Searching the tree shows that it became a child of Y behind the page X, which was the old location of M.

This behaviour is reproduceable and you also ran into this issue, if you move a new page behind a moved page (after creating it somewhere else)

[BUGFIX] create/move new page behind move-placeholder

Fixes the described scenerio below by using just another tcemain hook.

- Switch to a workspace without pending changes.
- Move page M that is located behind X as a child of Y to any other location.
- Now create a new page N behind our moved page M (using the pagetree drag & drop)
  the page seems to be located correct, but if you refresh the pagetree this new
  page N is not at the intended location anymore.
- Searching the tree shows that it became a child of Y behind the page X, which
  was the old location of M.

Revision aa5804dd - 2014-02-20 17:27 - Oliver Hader

[BUGFIX] moveContentRecordToDifferentPageAndChangeSorting fails

In a workspace, an existing content record is moved to an
existing page. Another existing record is moved after the
previously moved record on the target page. The Functional
Tests show, that the content records are faulty after the

processing and the first content record disappeared.

A similar behaviour has been discovered for pages which finally
lead to the regression causing this bug in issue #33104. Back
then a hook has been introduced for moving page records and
post-processing the database values. However, this hook has
been called for all move operations for any table and was wrong
in terms of the expected specific problem to be solved.

The hook gets reverted, since it's sufficient to resolve move
placeholders if a record shall be created after an existing one.
