TYPO3.Flow - Bug # 33148

Status:	Resolved	**Priority:**	Must have
Author:	Adrian Föder	**Category:**	I18n
Created:	2012-01-12	**Assigned To:**	Karsten Dambekalns
Updated:	2012-02-02	**Due date:**	

PHP Version:	
Has patch:	No
Complexity:	medium
Affected Flow version:	Git master
Subject:	CLDR locale chaining doesn't work correctly

Description

Simply said, the chaining in order to get also de.xml when de_DE.xml is asked for, doesn't work correctly.

The problem is mostly that the CldrRepository's findLocaleChain() that is responsible for that functionality, relies on a function localizationService->getParentLocaleOf(); while this function asks a localeCollection that never seems being populated correctly.

I'll add a test that should describe it better; anyhow I don't know if the mocking is correct (show inline PHP comment)

[BUGFIX] CLDR locale chaining doesn't work correctly

When collecting CLDR resource files, the required chaining
is corrected (i.e. de_DE.xml also requires de.xml to be
included).

The use of getParentLocaleOf() in the CldrRepository is wrong - as it only contains Locales for which resources actually exist. For CLDR data the case is different, the handling needs to be adjusted.
