Attached patch implements the namespacing of field names in forms and contains some refactorings and enhancements.

@Sebastian: Please check it and commit if you have no objections.

Thanks a lot for the very large patch.

I tested the patch and had to change line 61 in Tx\_Fluid\_ViewHelpers\_Form\_AbstractFormViewHelper from

```
$fieldNamePrefix = (string)$this->viewHelperVariableContainer->get('Tx_Fluid_ViewHelpers_FormViewHelper', 'fieldNamePrefix');
```

to

```
$fieldNamePrefix = (string)$this->viewHelperVariableContainer->get('Tx_Fluid_ViewHelpers_FormViewHelper', 'prefix');
```

Is this a bug or did I miss something.

This was a mistake. I've renamed "prefix" to "fieldNamePrefix" recently and apparently forgot to adjust the backported code respectively.. Attached is v2 of the patch that should fix that issue.
