Subject:	Add frontend localization to node controller and import; add locale settings to node and context		
Description			
<p>Add support for frontend localization.</p> <p>Solution chosen for now is setting a current language in the FLOW3 l18n service class which is used by the TranslateViewHelper class. Besides that the treatNodeWithContext filters nodes of the wrong language.</p> <p>Setting the languages can now be done using Settings.yaml, first language of the locales array is used as default language. This is just a placeholder for now as this of course has to be configured using TypoScript later on.</p>
