

## TYPO3.Fluid - Feature # 33487

<b>Status:</b>	Closed	<b>Priority:</b>	Could have												
<b>Author:</b>	Soren Malling	<b>Category:</b>	Core												
<b>Created:</b>	2012-01-27	<b>Assigned To:</b>	Bastian Waidelich												
<b>Updated:</b>	2013-07-29	<b>Due date:</b>													
<b>Has patch:</b>	No														
<b>Subject:</b>	Configure from what package to use Templates/Partial/Layouts														
<b>Description</b>	<p>This could be considered as a discussion, and not a final feature request.</p> <p>My feature wish, is to make is possible to configurate from which package to use templates/partials/layout file.</p> <p>Purpose:</p> <p>Create a application, and create a secondary application only containing the template files/different layout.</p> <p>This is most likely possible through AOP, but wouldn't it make sense to have it as a actual configuration property?</p>

### History

#### #1 - 2012-12-04 14:05 - Soren Malling

As you can't create you own module for Neos and using the BackendSubModule layout from the TYPO3.TYPO3 package, I bump this issue so it might some attention.

Or do you have any alternative solution?

```
<f:layout name="BackendSubModule" package="TYPO3.TYPO3" />
```

#### #2 - 2012-12-04 14:36 - Bastian Waidelich

FYI: have a look at #42176

#### #3 - 2013-07-29 13:58 - Bastian Waidelich

- Status changed from New to Closed
- Assigned To set to Bastian Waidelich

This will be possible with #42176 and #39870

Frankly it won't be possible to define the Package in the f:\* tag, but with the flexible Views.yaml implementation you'll be able to target any request
